COSEAL – September, 2017

# Motivation

## Goal

- ▶ Use MO-AAC to design multi-objective metaheuristics

## Case Study

- ▶ ParamILS & MO-ParamILS
- ▶ Multi-objective Local Search algorithms
- ▶ Bi-objective Permutation Flowshop Scheduling Problem

# Context

## Automatic Algorithm Configuration (AAC)

### Single-Objective AAC

**Single** performance indicator

- ▶ irace [López-Ibáñez *et al.*, 2016]
- ▶ ParamILS [Hutter *et al.*, 2009]
- ▶ SMAC [Hutter *et al.*, 2010]
- ▶ GGA++ [Ansótegui *et al.*, 2015], ...

### Multi-Objective AAC

**Multiple** performance indicators

- ▶ MO-ParamILS [Blot *et al.*, 2016]
- ▶ SPRINT-Race [Zhang *et al.*, 2015]

# Context

## Multi-Objective algorithms

### Performance Indicators

- ▶ Convergence ( $HV$ )
- ▶ Distribution ( $\Delta$ )
- ▶ Diversity
- ▶ Size

# Our Approach

## Small-Scale Analysis

Blot, Jourdan, Kessaci-Marmion

Automatic Design of Multi-objective Local Search Algorithms

GECCO'17, Berlin (Germany), July 2017

## Large-Scale Analysis

Blot, Pernet, Jourdan, Kessaci-Marmion and Hoos

Automatically Configuring Multi-objective Local Search using Multi-objective Optimisation

EMO'17, LNCS 10173: 61–73, Springer, Münster (Germany), March 2017

# MO-ParamILS

## Roots

### ParamILS

Hutter, Hoos, Leyton-Brown, Stützle

ParamILS: An Automatic Algorithm Configuration Framework

Journal of Artificial Intelligence Research (36), 2009

### MO-ParamILS

Blot, Hoos, Jourdan, Kessaci-Marmion and Trautmann

MO-ParamILS: A Multi-objective Automatic Algorithm Configuration Framework

LION'16, LNCS 10079: 32–47, Springer, Ischia Island (Napoli, Italy), May 2016

# MO-ParamILS

## MO-ParamILS

- ▶ Extension of ParamILS for **multiple performance indicators**
- ▶ Iterated MOLS on the configuration space
- ▶ Outputs a **Pareto set** of configurations

# MO-ParamILS

Machine learning process

## Experimental protocol

- ▶ Training (multiple times)
  - ▶ Training instances
  - ▶ Randomised seed and instance order
- ▶ Validation
  - ▶ Training instances
  - ▶ Every final training configuration
- ▶ Test
  - ▶ Testing instances
  - ▶ Every **non-dominated** validated configuration

# MO-ParamILS

## Training

Problem space

(execution on single instance)

- ▶ For every configuration
  - ▶ multiple runs
  - ▶ multiple instances
- ▶ Average  $HV$  and  $\Delta$  over multiple runs

# MO-ParamILS

## Training

Problem space

(execution on single instance)

Configuration space

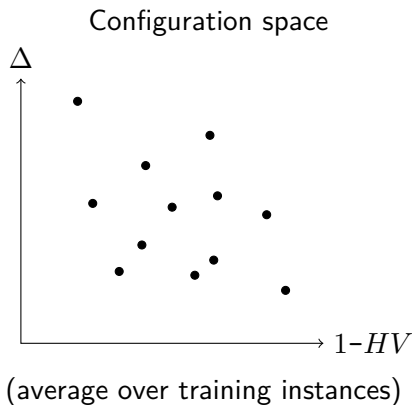

(average over training instances)

# MO-ParamILS

## Training

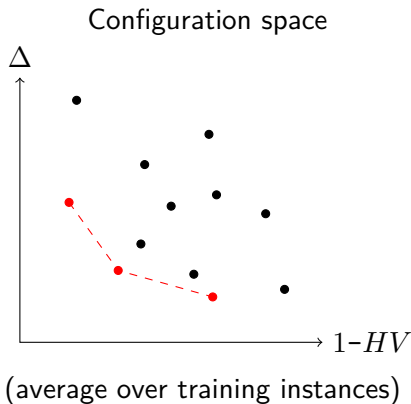

- ▶ iteratively investigates configurations
- ▶ refining quality estimations
- ▶ returns non-dominated
- ▶ shuffles training instances

# MO-ParamILS

## Training

- ▶ iteratively investigates configurations
- ▶ refining quality estimations
- ▶ returns **non-dominated**
- ▶ shuffles training instances

# MO-ParamILS

## Training

- ▶ iteratively investigates configurations
- ▶ refining quality estimations
- ▶ returns **non-dominated**
- ▶ shuffles training instances

# MO-ParamILS

Validation, test

- ▶ Training
  - ▶ multiple training runs
  - ▶ different instance subsets
  - ▶ incomparable quality estimation
- ▶ Validation
  - ▶ all training configurations
  - ▶ all training instances

# MO-ParamILS

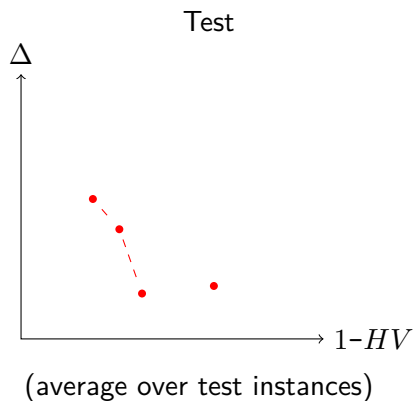

Validation, test

- ▶ Training
  - ▶ multiple training runs
  - ▶ different instance subsets
  - ▶ incomparable quality estimation
- ▶ Validation
  - ▶ all training configurations
  - ▶ all training instances

# MO-ParamILS

Validation, test

# Case Study

## Multi-objective Local Search Algorithms (MOLS)

### Key Points

- ▶ Efficient metaheuristics
- ▶ Used on many problems (e.g., scheduling, routing, assignment)
- ▶ Many strategies and parameters

### Instantiations

- ▶ Methods
  - ▶ Pareto Archived Evolution Strategy (PAES, 1999, 2000)
  - ▶ Pareto Local Search (PLS, 2001, 2004, 2011, 2012, 2015)
- ▶ Unifications
  - ▶ Stochastic Pareto Local Search (SPLS, 2012)
  - ▶ Dominance-based Multi-objective Local Search (DMLS, 2012)

# Case Study

## Permutation Flowshop Scheduling Problem (PFSP)

### Bi-objective PFSP

- ▶ 2 objectives
  - ▶ Makespan (max completion time)
  - ▶ Flowtime (sum completion time)
- ▶ Classical Taillard instances (20-100 jobs; 5-20 machines)

# Small-Scale Analysis

## Does MO-AAC actually find the best configurations?

### Exhaustive Analysis

- ▶ Every possible configuration
- ▶ On the test set

### MO-ParamILS

- ▶ Training (30 times)
- ▶ Validation
- ▶ Test

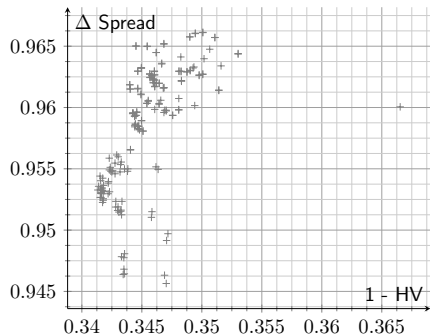

### Target Algorithm

- ▶ MOLS (189 configurations)
  - ▶ 4 categorical parameters
  - ▶ 3 integer parameters

# Exhaustive Analysis

+: Configuration

PFSP Taillard instances – 50 jobs

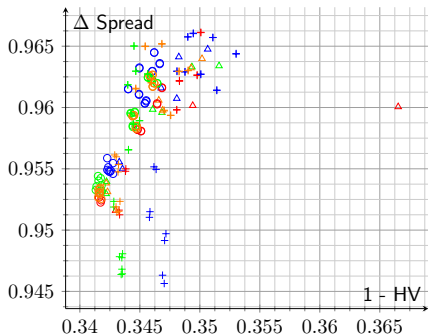

PFSP Taillard instances – 100 jobs

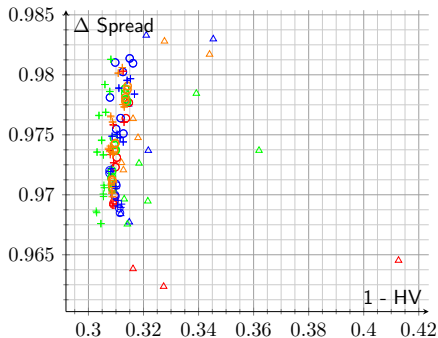

# Exhaustive Analysis

Exploration strategy:  $\Delta$   $\circ$   $+$  ; Selection strategy: ■ ■ ■ ■

PFSP Taillard instances – 50 jobs

PFSP Taillard instances – 100 jobs

# Exhaustive Analysis

## Pareto optimal solutions

PFSP Taillard instances – 50 jobs

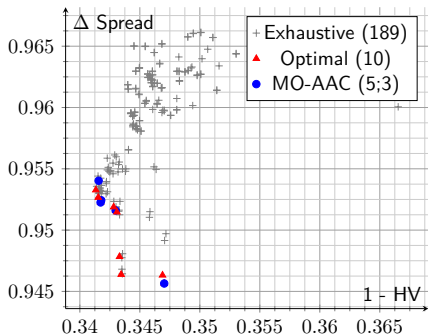

PFSP Taillard instances – 100 jobs

# MO-ParamILS

Using exhaustive test analysis

PFSP Taillard instances – 50 jobs

PFSP Taillard instances – 100 jobs

# Interpretations

## Exhaustive Analysis

- ▶ Big differences wrt benchmark
- ▶ Parameter consistency

## MO-ParamILS

- ▶ No loss of hypervolume
- ▶ Really close to the optimal configurations

## Should we use AAC or MO-AAC?

### Compare 3 AAC Training Approaches

- ▶ MO-ParamILS ( $HV \parallel \Delta$ )
- ▶ SO-ParamILS ( $HV$ )
- ▶ SO-ParamILS ( $HV+\Delta$ ) ( $0.75HV + 0.25\Delta$ )

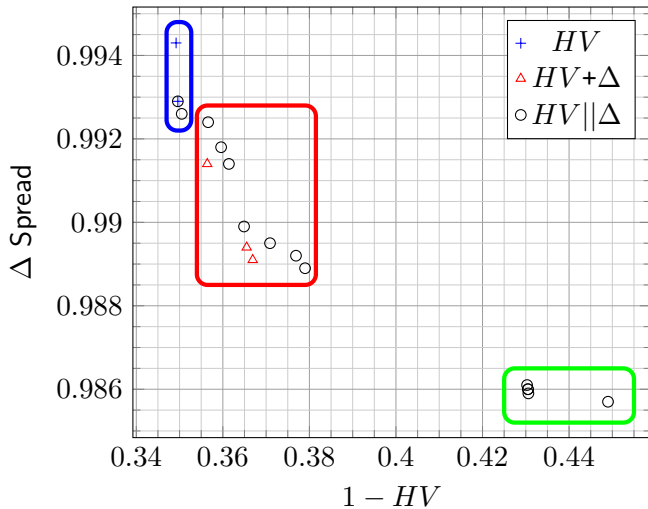

### Target Algorithm

- ▶ MOLS (2790 configurations)
  - ▶ 4 categorical parameters
  - ▶ 4 integer parameters

# Test Performance

PFSP Taillard instances – 50 jobs

# Interpretations

## SO-ParamILS ( $HV$ )

- ▶ Disregards diversity entirely

## SO-ParamILS ( $HV+\Delta$ )

- ▶ Only in the aggregation direction
- ▶ Requires costly indicator normalisation

## MO-ParamILS ( $HV||\Delta$ )

- ▶ Wide, diverse covering

# Wrap up

## Perspectives

- ▶ Investigate other problems (e.g., MO-TSP, MO-QAP)
- ▶ Extends to other algorithms (e.g., EA)

## Take-home Message

- ▶ Configuring a MO algorithm is a MO problem
- ▶ MO-ParamILS can design efficient MO metaheuristics
- ▶ Use multi-objective AAC!
  - ▶ No loss of performance
  - ▶ Way better diversity
